Hiring Manager

Delta Air Lines

Atlanta, GA

Re: Graduate Intern, Data Scientist (Spring 2027)

Dear Hiring Manager,

I am applying for the Graduate Intern, Data Scientist (Spring 2027) position at Delta Air Lines, found through Jobright. I hold a Master of Science in Applied Computer Science from Northwest Missouri State University and have built machine learning models, SQL data pipelines, and decision-support tools that align closely with your Ops Digital Decision Science team's mission.

At Mondei I trained routing and classification models in PyTorch and scikit-learn, lifting routing accuracy by 18% and reporting precision, recall, and error cases each sprint. I collected data via SQL queries, performed exploratory analysis on malformed PDFs across thousands of pages, and built grounded document Q&A on Azure AI Search that cut hallucination escalations by 40%. My ParseDoc.ai project extracted layout and text from long PDFs, then trained detectors and improved bounding-box recovery by ~15%, delivering structured fields ready for downstream analytics.

I work comfortably with relational databases (SQL), Python, and machine learning platforms including scikit-learn, PyTorch, and TensorFlow. I document setup steps, log evaluation metrics in MLflow for replayable experiments, and present analysis with concise narratives and visuals so business owners understand model outputs and failure modes. I learn new techniques quickly within cloud-based platforms, ask for feedback each sprint, and embrace diverse thinking and collaboration across product and operations teams.

Delta connects the world through data-driven operational decisions, and I am excited to contribute advanced analytics solutions that improve airline performance. I am able to commit to the January 11, 2027 to May 7, 2027 timeline and work onsite in Atlanta. I would welcome the opportunity to discuss how my background can support your team. Thank you for your consideration.

Sincerely,

Bhanu Prakash Bathini
