Re: AI Engineer Intern

Dear Hiring Manager,

I am applying for the AI Engineer Intern position at DiligenceVault, found through Jobright. I hold a Master of Science in Applied Computer Science from Northwest Missouri State University and have built RAG systems, document intelligence pipelines, and AI agents that solve messy data problems in production environments.

At Mondee I built grounded document Q&A on Azure AI Search and GPT-4o, cutting hallucination escalations by 40% and raising groundedness scores by 35% through source pinning and prompt refinement. In my ParseDoc.ai project I extracted layout and text from long PDFs, trained detectors for structured output, and improved bounding-box recovery by ~15%. My Agentic Workflow project prototyped multi-step agents with tool calls, evaluation harnesses in MLflow, and workflow automations using n8n and Make.com, directly matching your RAG, semantic search, and AI agent requirements.

I work in Python with PyTorch, scikit-learn, BERT fine-tuning, and embeddings daily. I build evaluation frameworks that track precision, recall, and groundedness, log experiments in MLflow, and document setups so reviewers and teammates can reproduce results. I am comfortable with messy real-world data, having parsed thousands of malformed PDFs and recovered ~12% accuracy through class-imbalance fixes. I prototype rapidly, test ideas, and iterate based on feedback.

DiligenceVault's AI-powered diligence and decision intelligence platform sits at the intersection of investment research and modern AI, a domain I am eager to explore. I am available for part-time hybrid work and would welcome the opportunity to discuss how I can contribute. Thank you for your consideration.

Sincerely,

Bhanu Prakash Bathini
