EDUCATION

Northwest Missouri State University

Maryville, MO

Master of Science in Applied Computer Science

Aug. 2023 – Dec. 2024

- Coursework: Database Systems, Machine Learning, Data Mining, Cloud Computing, Software Engineering
- Certification: Claude Certified Architect (CCA) — Foundations, Anthropic (2026)

EXPERIENCE

Mondee

Fremont, CA

AI/ML Engineer

Jan. 2023 – Aug. 2026

- Built and maintained data pipelines connecting FastAPI services to cloud endpoints, enabling product and operations teams to access structured production data.
- Developed document Q&A system on Azure AI Search and GPT-4o with trace-based debugging that reduced hallucination escalations by 40%.
- Improved data quality scores by 35% by pinning source passages, refining prompts, and logging failure modes for cross-functional reviewers.
- Trained routing and classification models in PyTorch and scikit-learn; improved routing accuracy by 18% and reported precision, recall, and error cases each sprint.
- Prototyped workflows from natural-language specs using Python automation tools, accelerating prototype delivery by approximately 25% and documenting setup for onboarding.

Cosmic Reality

Missouri, USA

AI/ML Engineer

Apr. 2020 – Oct. 2022

- Built ETL pipelines in Python using PDFMiner and PyPDF2 to convert thousands of malformed PDF pages into structured tables for downstream analysis.
- Trained sentiment and spam classifiers with scikit-learn and NLTK; recovered approximately 12% accuracy after addressing class-imbalance and feature-engineering issues.
- Developed classification and time-series models in PyTorch and TensorFlow; logged training runs in MLflow for reproducible experiments and model versioning.
- Packaged scoring applications with Docker on AWS EC2/S3 and documented deployment workflows, reducing handoff time by about 40%.

PROJECTS

Agentic Workflow & Eval Harness | *Python, FastAPI, MLflow, n8n, Make.com, Retell AI*

2023 – 2026

- Built multi-step data workflows in Python and FastAPI that call APIs, validate outputs, and retry failed steps with metrics logged in MLflow.
- Developed statistical evaluation harness tracking precision, recall, and error patterns across workflow runs for iterative performance improvement.
- Prototyped automation pipelines using n8n and Make.com with data quality checks and guardrails for production handoff.

ParseDoc.ai | *Python, PyTorch, Azure, Hugging Face, n8n*

2024 – 2026

- Extracted structured data from long PDFs using Python and PyTorch detectors, enabling downstream pipelines to consume clean fields instead of raw text.
- Generated labeled synthetic training data and improved bounding-box detection accuracy by approximately 15% for layout extraction tasks.
- Integrated extraction pipeline into Azure Search and n8n workflows, maintaining data provenance and auditable source traces for quality assurance.

RESEARCH, PUBLICATIONS & VOLUNTEER

Peer review: ACM RecSys; ISCA CATA (Springer) — reviews on method, evaluation, and clarity.

Research: Document layout detection and grounded Q&A (ParseDoc.ai); Hugging Face `dataset_parsecdoc.ai`.

Volunteer: Leo Club charitable member — community service, fundraising, and local outreach.

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript

Data & Pipelines: Pandas, NumPy, SQL joins, data pipelines, APIs, FastAPI, document extraction

ML & Statistics: PyTorch, TensorFlow, scikit-learn, BERT fine-tuning, evaluation (precision/recall)

Cloud & Dev Tools: Azure AI Foundry, Azure AI Search, Docker, GitHub Actions, AWS EC2/S3

Workflow & Quality: MLflow, n8n, Make.com, trace-based debugging, workflow documentation
