Re: Data Science/ Data Engineer Intern

Dear Hiring Manager,

I am applying for the Data Science/Data Engineer Intern position at Hadrian, found through Jobbright. I hold a Master of Science in Applied Computer Science from Northwest Missouri State University and have built production data pipelines, trained machine learning models, and delivered analytics that directly improved decision-making in fast-paced environments.

At Mondee I built grounded document Q&A on Azure AI Search and GPT-4o, cut hallucination escalations by 40%, and raised groundedness scores by 35% through structured logging and prompt engineering. I trained routing and classification models in PyTorch and scikit-learn that lifted accuracy by 18%, reporting precision, recall, and error cases each sprint. At Cosmic Reality I developed PDF-to-structured-data pipelines in Python so thousands of malformed pages became consistent tables, and trained sentiment and time-series models in PyTorch and TensorFlow with MLflow experiment tracking.

I am proficient in Python and SQL and have hands-on experience with data pipelines, cloud data warehouses, and ETL workflows on Azure and AWS. I write clean, well-tested code, participate in code reviews, document setup steps, and surface data quality issues during every sprint. My background in statistics and machine learning lets me turn messy datasets into defensible conclusions, and I communicate analysis clearly to non-technical partners through dashboards and written reports.

Hadrian's mission to build autonomous factories for aerospace and defense through AI and advanced manufacturing is inspiring. I am excited to prototype statistical and machine learning solutions using real production data and contribute to factory performance reporting. I would welcome the opportunity to discuss how I can support your team. Thank you for your consideration.

Sincerely,

Bhanu Prakash Bathini
